#### Notes:

1. Check that straw fiber rolls are secure and held in place at the start of each work day and before exiting the site for the day.
2. Sweep and clean up all loose debris at the end of each work day before exiting the site.
3. Check that all BMPs are properly in place and any debris piles are covered plastic sheeting within 24 hours of a significant rain even.
4. Upon completion of demolition project all debris will be removed from the site, the site will remain fenced, the rumble plate will be removed, the straw fiber roll will be continued across former driveway, and the straw fiber roll will remain secured in place until the site is developed. All soil surfaces will be covered with straw mulch in order to prevent both wind and water erosion of soil surfaces.

#### Owner's Statement:

I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the ESCP to reflect current conditions, or failing to properly and/or adequately implement the ESCP may result in revocation of grading and/or other permits or other sanctions provided by law.
